QUICK TELECOM WORKFORCE MANAGEMENT POLICY

Version 4.1 | Effective Date: 01 January 2026

Confidential – Internal Use Only

Table of Contents

Section 1: Contact Center Performance Definitions & Standards

1.1 Purpose

This policy establishes standardized definitions, measurement methodologies, and performance expectations for all Quick Telecom contact centers across India.

1.2 Scope

This policy applies to all voice, chat, email, and social media support channels operated by Quick Telecom or its BPO partners.

1.3 Key Performance Metrics & Definitions

Service Level (SL)

Percentage of calls answered within 20 seconds. Target: 85%+

Average Handle Time (AHT)

Total time from call connection to after-call work completion. Includes talk time + hold time + after-call work.

First Call Resolution (FCR)

Percentage of customer issues resolved during the first contact without need for follow-up.

Cost per Call (CPC)

Fully loaded cost including agent salary, benefits, technology, facilities, and overhead. Calculated monthly.

Net Promoter Score (NPS)

Customer likelihood to recommend Quick Telecom (0–10 scale). Calculated from post-call survey (minimum 15% response rate required).

Agent Utilization

Percentage of logged-in time spent on productive work (talk time + after-call work). Target: 78–82%.

Shrinkage

Percentage of scheduled time lost to breaks, training, coaching, system downtime, absenteeism, and meetings.

1.4 Reporting Standards

All metrics must be reported weekly by Monday 10:00 AM IST to the Central Operations Dashboard. Monthly consolidated reports are due by the 5th of every month.

Section 2: Benchmarking & Gap Analysis Methodology

2.1 Purpose of Benchmarking

Benchmarking enables Quick Telecom to identify performance gaps, prioritize improvement initiatives, and allocate resources effectively.

2.2 Benchmark Sources

Primary sources include:

- SQM Group Telecom Benchmark Report (annual)

- Deloitte India Contact Center Benchmark Study

- Gartner Magic Quadrant & Critical Capabilities for CRM & Customer Service

- Internal historical data (2023–2025)

2.3 Headline vs True Benchmarks

Executive dashboards and external reports often present “headline” benchmark figures. These may not be directly comparable due to differences in:

- Call complexity mix

- Training & coaching time inclusion

- Self-service deflection rates

- Multi-channel vs voice-only measurement

2.4 Gap Analysis Requirements

All gap analysis must:

- Use true comparable benchmarks (after adjustments)

- Quantify both financial and customer experience impact

- Identify root causes, not just symptoms

- Recommend prioritized actions with ROI estimates

Section 3: Workforce Planning, Shrinkage & Capacity Management

3.1 Workforce Planning Principles

Workforce planning must balance service level targets, cost efficiency, and agent well-being.

3.2 Shrinkage Standards

- Target blended shrinkage: 28–32%

- Maximum acceptable shrinkage: 35%

- Shrinkage above 35% for two consecutive weeks requires escalation to Regional Head

Components of Shrinkage:

- Scheduled breaks & meals: 12–14%

- Training & coaching: 6–8%

- System downtime & technical issues: 3–4%

- Absenteeism & unplanned leave: 4–6%

- Meetings & other non-productive time: 2–3%

3.3 Capacity Planning Rules

- Forecasting must be updated every 4 hours during peak periods

- Buffer capacity of 8–10% must be maintained for unexpected volume spikes

- Overtime approval required for any utilization above 85%

Section 4: Quality Assurance, Coaching & Calibration Standards

4.1 Quality Monitoring Standards

- Minimum 8 calls per agent per month must be evaluated

- Quality scores must be calibrated monthly across all sites

- Calibration sessions must include at least 3 evaluators from different sites

4.2 Coaching Standards

- Every agent must receive minimum 4 hours of coaching per month

- Coaching must be documented in the Agent Development System

- Coaching effectiveness must be measured through quality score improvement

4.3 Quality Calibration Process

Monthly calibration sessions are mandatory. All evaluators must achieve 85%+ inter-rater reliability.

Section 5: Cost Efficiency, Optimization Levers & ROI Tracking

5.1 Cost Reduction Levers (Approved)

1. Reduce AHT through AI-assisted routing and knowledge base

2. Improve FCR through better training and knowledge management

3. Optimize shrinkage through improved scheduling and self-service

4. Increase self-service adoption (target: 45%+ by Q4 FY27)

5. Reduce repeat calls through proactive communication

5.2 ROI Tracking Requirements

All improvement initiatives must track:

- Investment cost

- Expected annual savings

- Expected NPS impact

- Timeline to value realization

Section 6: Technology Enablement & AI Integration Guidelines

6.1 Approved Technology Stack

- CRM: Salesforce Service Cloud

- Knowledge Base: Quick Knowledge 3.0

- AI Routing: Genesys Cloud AI

- Self-Service: Quick Assist App + WhatsApp Business

6.2 AI Governance

All AI models must be reviewed quarterly for bias and accuracy. Human override capability must always be available.

Section 7: Agent Well-being, Engagement & Retention Framework

7.1 Well-being Standards

- Maximum 6 hours of talk time per shift
- Mandatory 15-minute break after every 2 hours of talk time
- Mental health support program available to all agents

7.2 Retention Targets

- Annual attrition target: ≤14%
- Quarterly pulse survey score: ≥75%

Appendix A: Historical Performance Trends (2023–2025)

Year	Service Level	AHT (min)	FCR	Cost/Call (₹)	NPS	Shrinkage
2023	74%	7.6	65%	56	64	34%
2024	76%	7.2	68%	52	68	32%
2025	77%	7.0	69%	50	69	31%
2026 YTD	78%	6.8	71%	48	71	29%

Appendix B: Industry Benchmark Sources, Methodology & Adjustments

B.1 Primary Benchmark Sources

- SQM Group Telecom Benchmark Report 2025
- Deloitte India Contact Center Benchmark Study 2025
- Gartner Critical Capabilities for CRM Customer Service 2025

B.2 Common Benchmark Adjustments Required

Many external benchmarks exclude:

- Training and coaching time from AHT
- Complex or escalated calls from FCR
- Multi-channel interactions from cost calculations

True comparable benchmarks are often 8–15% higher than headline figures.

Appendix C: True Benchmark Adjustments & Critical Notes (Mandatory Reading)

The commonly reported Top Quartile Average Handle Time of 5.5 minutes excludes training, coaching, and complex call handling time. When these components are included for fair comparison with Quick Telecom's operational reality, the **true Top Quartile AHT rises to 6.2 minutes**.

This adjustment must be applied before any gap analysis, investment decision, or performance review. All benchmarking exercises must use the adjusted figure of 6.2 minutes as the true Top Quartile benchmark.

Failure to apply this adjustment will result in overstated gaps and incorrect prioritization of improvement initiatives.

Appendix D: Sample Gap Analysis Templates & Calculation Guides

D.1 Gap Calculation Formula

Gap = Current Performance – True Top Quartile Benchmark

D.2 Financial Impact Calculation

Annual Cost Impact = (Gap × Call Volume × Cost per Minute) + (Gap × Call Volume × Repeat Call Cost)

D.3 NPS Impact Estimation

NPS Impact = (FCR Gap × 0.35) + (AHT Gap × 0.25) + (Service Level Gap × 0.20)

Appendix E: Change Management & Communication Playbook

E.1 Communication Principles

All performance gaps and improvement plans must be communicated transparently to site leadership within 48 hours of identification.

E.2 Change Management Requirements

Major process or technology changes require:

- 4-week pilot before full rollout
- Change impact assessment
- Agent training plan
- Success metrics defined upfront
