

section	problem area	current state	notes
Problem Statement	Fan satisfaction	Fallen sharply	Now 61 versus 78 last season
Problem Statement	Season ticket renewals	Down 15 percent	Versus same point last season
Problem Statement	Primary fan complaint	Long concession waits	Highly visible issue during game breaks

section	proposal element	detail	notes
POS Proposal Summary	Vendor claim	Checkout time can be reduced by 20 to 30 percent	Vendor estimate
POS Proposal Summary	System feature	Faster authorization	Payment speed improvement
POS Proposal Summary	System feature	Integrated upsell prompts	Commercial benefit oriented
POS Proposal Summary	System feature	Simplified cashier interface	Training and consistency benefit

section	metric	current state	improved case	notes
Illustrative Checkout Impact	Reported checkout time	22 seconds	16 to 18 seconds	Headline checkout improvement case
Illustrative Checkout Impact	Headline implication	Faster payment should improve queue movement	Not yet proven as system bottleneck	Needs bottleneck validation

section	reason considered	detail	notes
Reasons Management Is Considering POS	Visibility to fans	Payment feels visible to fans	May bias diagnosis toward checkout
Reasons Management Is Considering POS	Ease of measurement	Cashier lane metrics are easy to monitor	Operationally salient
Reasons Management Is Considering POS	Scalability	Technology solution is scalable and sponsor friendly	Attractive but may not solve true constraint

section	alternative option	expected operational effect	notes
Alternative Improvement Options	Menu simplification for loaded items	Reduce customization burden	Targets downstream process
Alternative Improvement Options	SKU rationalization during stable peak	Fewer complex orders	Improves flow under peak demand
Alternative Improvement Options	Pre batching standard high volume items	Faster hot line completion	Supports separation of simple versus complex work
Alternative Improvement Options	Labor reallocation toward customization support	Relieve constrained station	Only if feasible within staffing model
Alternative Improvement Options	Dedicated fast lane for non customized baskets	Protects simple orders from custom order delay	Potential no capex redesign

section	prior change	observed effect	notes
Prior POS Patch Impact	Payment authorization lag	Reduced by about 6 seconds	Versus prior baseline
Prior POS Patch Impact	Fan reported total wait time	No measurable improvement	Buried signal that payment may not be the bottleneck
Prior POS Patch Impact	Implication	Another process step may still be constraining flow	Important decision clue

section	menu group	share of peak orders percent	notes
Menu Complexity Review	Loaded fries	8	Customization heavy
Menu Complexity Review	Loaded hot dogs	9	Customization heavy
Menu Complexity Review	Family combo meals	3	Customization heavy
Menu Complexity Review	Combined customization heavy share	20	Disproportionate time consumption during peak

section	decision condition	implication	notes
Decision Note	If payment is not the binding bottleneck	POS investment alone will not materially raise system throughput	Core decision logic
Decision Note	Owner request	Proof of true bottleneck required before capex approval	Decision constraint
Decision Note	Analytical requirement	Recommendation must be based on true constraining stage not visible dashboard metric	Prevents shallow answer

section	option	description	notes
Recommendation Options	Option A	Approve POS now	Valid only if checkout is proven bottleneck
Recommendation Options	Option B	Defer POS and redesign menu and peak line operations first	Correct if customization remains bottleneck
