Subject: Temporary Morning Navigation and Quick-Token Pilot

Period covered: 6 Jan to 31 Jan

Location: General Medicine OPD

Purpose: Reduce visible congestion during 9:00 AM to 11:00 AM

Pilot components

- 1 temporary “navigator” stationed before registration to pre-check returning patients’ documents
- 1 temporary token support desk used on high-load weekdays to pre-write doctor tokens for repeat patients
- 2 management trainees deployed from central admin on Mondays and Thursdays only
- Support available only until end-January; not approved for continuation in BAU staffing plan

This is the key trap. It means the “4 registration servers” shown in File 1 are not all baseline registration capacity.

Staffing Clarification Table

Resource	Reported in dashboard summary?	Routine BAU?	Peak-window availability	Effective role
Registration Executive 1	Yes	Yes	9-11 AM	Full registration
Registration Executive 2	Yes	Yes	9-11 AM	Full registration
Registration Executive 3	Yes	Yes	Yes, but leaves for billing support at 10:30 on 3 weekdays	Full registration until redeployed
Registration Executive 4	Yes	No	Pilot only	Quick-token / document pre-check, not full registration
Central Admin Trainees (2)	No	No	Mondays and Thursdays only	Queue guidance only
Triage Nurse 1	Yes	Yes	9-11 AM	Full triage
Triage Nurse 2	Yes	Yes	9-11 AM	Full triage

Note:

Dashboard registration wait excludes time spent in the pre-check / quick-token line where pilot staff screened repeat patients before they entered the HIS registration queue. Reported registration waiting time therefore reflects post-screen queue only for the pilot period.

Observed Work Content by Registration Type

Registration Type	Share of Patients	Avg Time if Full Registration (min)	Avg Time if Quick-Token Pilot Used (min)
New patient	28%	4.5	n.a.
Returning patient with complete file	49%	2.5	1.0
Returning patient with missing document	13%	4.0	2.0
Senior citizen assisted cases	10%	5.0	3.0
