

Metric	Oct	Nov	Dec	Jan
Avg weekday repair tickets	352	371	398	420
Avg Monday repair tickets	379	401	432	451
Peak window share 10:00 AM to 2:00 PM	54%	55%	57%	57%

Current flow:

- ticket creation
- remote triage
- slot assignment
- zone dispatch
- travel and repair
- closure

Current operating principle:

tickets are assigned to zone dispatch pools after slot creation. Cross zone reassignment is limited once a ticket is committed to a customer slot.

Zone delay heatmap

Time	North backlog	South backlog	East backlog	West backlog
10:00	13	5	7	9
11:00	20	6	8	15
12:00	27	7	10	19
1:00	29	7	9	26
2:00	26	6	8	28

Appointment adherence

Zone	Missed Slot Rate	Avg Travel Time Min	First Time Fix Rate
North	19%	35	78%
South	9%	27	83%
East	11%	30	81%
West	22%	37	77%

Complaint split

Complaint Category	Share
Technician came late or next day	46%
Appointment rescheduled twice	19%
Too many support calls before visit	14%
Fault not fixed first visit	13%
Agent did not explain status	8%

Dispatch planner note

Zone planners reported repeated under use of South slots between 11:30 AM and 1:30 PM while North and West carried spillover into next day appointments. Manual cross zone reassignment was rarely used because customer slots were pre committed and planner approval was required.
