

Section 1: Contract SLA Commitments

Parameter	FMCG Carrier	Chemical Carrier
Gross crane rate (GCR) benchmark	28 moves/hour	22 moves/hour
Net crane rate (NCR) benchmark	24 moves/hour	19 moves/hour
Moves per call commitment	165	140
SLA measurement basis	Per call, not monthly aggregate	Per call, not monthly aggregate
OEE floor for contract compliance	80%	80%

Note: SLA is evaluated on a per-call basis. Monthly aggregate performance reported in the terminal KPI dashboard does not reflect the per-call commitment structure and should not be used as the primary SLA compliance measure.

Section 2: Penalty Trigger and Computation

Trigger	Computation
Moves below 95% of commitment	Penalty = (Committed moves – Actual good moves) × Penalty rate per move
FMCG: $165 \times 95\% = 157$ minimum good moves	Shortfall below 157 × INR 4,200
Chemical: $140 \times 95\% = 133$ minimum good moves	Shortfall below 133 × INR 3,800

Example calculation for FMCG carrier

- Committed: 165 moves
- Actual good moves per call: 154 (derived from OEE quality rate of 96.3%)
- Shortfall vs minimum: $157 - 154 = 3$ moves below threshold
- Penalty per call: $3 \times 4,200 = \text{INR } 12,600$
- Penalty per month (8 calls): INR 100,800

Example calculation for chemical carrier

- Committed: 140 moves
- Actual good moves per call: 127 (derived from quality rate of 90.8%)
- Shortfall vs minimum: $133 - 127 = 6$ moves below threshold
- Penalty per call: $6 \times 3,800 = \text{INR } 22,800$
- Penalty per month (6 calls): INR 136,800

Section 3: Shared Crane Operator Clause

Clause 7.4 - Equipment Operator Continuity

The terminal warrants that crane operators assigned to Tier 1 vessel operations shall maintain continuity of assignment for the duration of each vessel call. Operator rotation or reassignment during an active vessel call will be treated as a performance deduction event and reflected in the Net Crane Rate calculation for that shift.

Implication: Shared operator rotation every 2 hours across Berth 2 and Berth 4 is in direct violation of Clause 7.4 and is a contractually penalisable performance deduction trigger, not merely an operational inefficiency.

Sections 4: Port Community System, EDI Integration, Long-Term Expansion

PCS upgrade timeline for EDI message standard migration. B/L data quality improvement initiative. Long-term berth expansion discussion with port authority. Cross-terminal interchange agreement with neighboring terminal. Container tracking system API integration roadmap.
